For example, if the time zone of your store is Eastern Standard Time (EST) and you select a start date of November 26, the discount starts at 12:00 EST on November 26. Create a fixed value or percentage When you create a new discount, it appears on Discount codes tab on the Discounts page in your Shopify admin. To distribute this discount, you can send the code to your customers by email, or display it on your online store. Your customers need to enter the code during checkout to receive the discount. If your discount is set to discount all products, then the discount is applied proportionally across all items at the cart. For example, if you have a \$50 discount applied to a cart with a \$50 and a \$100 item, then the first item is discounted by \$16.50 and the second one by \$33.50. If the total price of the order is less than \$50, then the value of each item is discounted to \$0. The order value can't go below \$0. Fixed value and percentage discounts apply to the products in an order, but don't apply to shipping costs. Steps: From your Shopify admin, go to Discounts. Click Create discount, and then click Discount code. In the Discount code section, do either of the following: Enter a name for the new discount code, for example, 15offtecklaces. Click Generate code. In the Types section, do either of the following: Select Percentage, and then enter a percent value in the Value section. Select Fixed amount, and then enter a monetary value in the Value section. If you want the discount to apply to specific collections or products, then in the Applies to section, do either of the following: Select Specific collections, check the appropriate collections, and then click Add. Select Specific products, check the appropriate products and/or variants, and then click Add. Optional: To create a fixed value discount code that can be applied to specific products or collections, check Only apply discount once per order to limit the customer amount to qualify for the discount. If the discount applies to a specific product or collection, only these items contribute to the minimum purchase amount. Select the minimum amount of items to request that customers order a minimum number of products to qualify for the discount. If the discount applies to a specific product or collection, only these items contribute to the minimum quantity. In the customer admissibility section, select whether this discount applies to all, specific customer segments or specific customers. The customer list displays the email address that the customer used to register for your store. If no e-mail address has been provided, the list displays the customer's phone number. To limit the use of the discount, in the Use Limits section, please do one of the following: Check the limit number of times this discount can be used in total to set a total number of times when you can use a discount. For example, setting a 200 limit allows you to use the discount code 200 times through the customer base. If you choose this setting, customers can use the discount several times. Check the limit to one per customer to limit the discount to a customer used by monitoring the e-mail address or the phone number of a customer. This option is only available for fixed-value discounts. In the Active Date section, set the start date for the discount, then run one of the following: if you want to set an end date for the discount, then click the Semp End Date and set the date at the end of the discount. If you want the discount to be valid only for today, select the same calendar day for both start date and end date. If you do not want to expire the discount code, do not set an end date for your discount. Click Save Discount Code.
